The company has passed the ISO 9001:2008 quality management system certification

## Expanded View

## Installation steps

### Adult assembly required.

#### Step 1: Rearview Mirror

- Align the rearview mirror with the car slot

#### Step 2: Wheels

##### For Front and Rear Wheels

- Step 1) Put gasket to axle
- Step 2) Put wheel on axle
- Step 3) Put another gasket to axle
- Step 4) Fix the cotter
- Step 5) Align wheel cover with wheel slots

#### Step 3: Steering Wheel

- Remove nut and bolt from steering wheel
- Firmly connect the wires from steering wheel to wires on the dashboard
- Align steering wheel onto the steering column, lock in place using nut and bolt

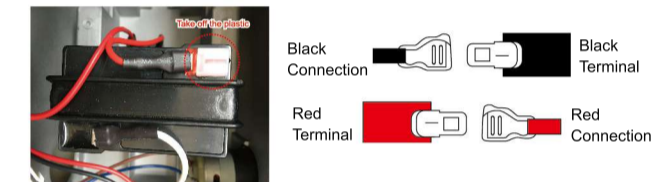

#### Step 4: Seat

- Align seat with car slot and fasten the screw

### Connecting the Battery

- Remove plastic seal cover
- Connect Black Terminal with Black Connection
- Connect Red Terminal with Red Connection

Ensure that same coloured terminals are paired with respective connections!

### CHARGING PRECAUTIONS BEFORE USE

#### Please read manual carefully before use.

Before operating the vehicle, check if there has been wear or damage to the battery, charger, connectors and any other part of the vehicle. If any damage is found, contact the seller to have the charger repaired or replaced immediately. Do not use a damaged product.

#### To get started.

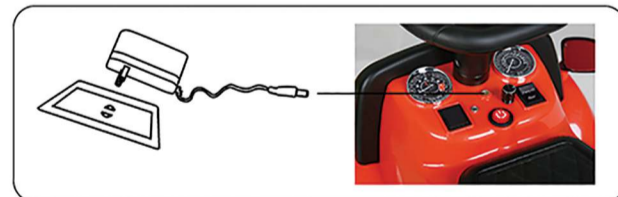

- Press the power switch to OFF position to turn the power off. Open the seat, connect the battery plugs, with the red and black wires to their respective terminals. Please ensure the red wire is connected to the red battery terminal and the black wire is connected to the black battery terminal.
- Ensure that the battery is secured to the car with the bracket. Otherwise the battery may loosen and fall out.

### BATTERY & CHARGING

After first use, charge the battery for 8-10 hours until battery is fully charged. Subsequent charges should be 6-8 hours, but not exceeding 10 hours. **TURN OFF THE POWER SWITCH WHEN CHARGING**

Batteries should still be charged at least once a month in order to keep the cells active.

- Open the cover of charging socket on the car.
- Plug the charge into the charging socket.
- Plug the other end of the charger into your wall socket.

#### DO:

- Recharge the battery when you notice a decrease in speed and power is the car.
- Charge at least once a month to keep the battery cells active.
- Only adults (aged 12+) should be handling the battery/adaptor
- Operate the battery and charger specified according to the manual instructions.
- The battery is heavy and contains sulfuric acid (electrolyte). Dropping the battery could result in serious injury. Handle with care.

#### DO NOT:

- Do not use the car until the battery is drained completely or to a crawling speed.
- Do not reverse battery polarity or connect wires to a short circuit.
- Do not allow children under the age of 12 to handle the battery.
- Do not open the battery and the charger.

It is normal for the battery/adaptor to feel warm while charging, but if it feels too hot, stop charging immediately and check battery/adaptor.

### TROUBLESHOOTING COMMON PROBLEMS

#### Problem 1: The car will not move.

- Charge battery for 6-8 hours. The battery is likely low on charge.
- Making sure the charger and the car has been removed from the car charging point.
- The battery wires are not connected. Please check the connections on the battery terminals are firmly in place.

#### Problem 2: The car only drives for a short time/distance.

- Charging the battery for 6-8 hours. The battery is likely low on charge.
- Keep the battery active by charging the battery at least once a month to keep the active.
- Replacing the battery. The battery may need to be replaced depending due to natural deterioration of its charging history and age.

#### Problem 3: The audio does not work.

- Ensuring the volume is turned up and the MP3 lead is not connected. The steering wheel sounds will not work when the MP3 is plugged into the car.

#### Problem 4: Charger makes a buzzing sound while charging

This is normal.

#### Problem 5: Charger overheating.

It is normal for the battery and charger to warm slightly during charging. If they feel excessively hot then please check for a current overload or battery short circuit.

#### Problem 6: Unable to charge car.

- Making sure that the battery wires are connected properly. Check that the connections on the battery terminals are firmly in place, with the red wire in the red terminal and respectively for the black wire.
- Ensure that the charger is properly inserted into place
- During charging, make sure the charger is plugged into the power outlet correctly. The charger may feel slightly warm while charging.

If the battery, car body wiring, charger or motor is still not working correctly. Please contact the agent or manufacturer for further assistance.

#### To avoid fuse cut off the power:

- Max: 30kgs, overload is forbidden
- Do not drag any item behind this product.
- Do not allow water or other liquids dip the electrical parts.
- Do not change the line system by yourself.

### BATTERY DISPOSAL

Your sealed lead-acid battery must be recycled or disposed of in an environmentally sound manner.

- Do not dispose of lead-acid battery in a fire. The battery will explode.
- Do not dispose of lead-acid battery in your regular household trash. The incineration land filling or mixing of sealed lead-acid batteries with household trash is prohibited by law.
- Return an exhausted battery to your local approved lead-acid battery recycle, such as a local seller of automotive batteries
- Contact your local waste management officials for information on how to environmentally recycle & dispose of lead-acid batteries.
